FACULTY POSITIONS IN AFFECTIVE NEUROSCIENCE - TEXAS A&M UNIVERSITY. As part of an ongoing effort to enhance the strength of an interdisciplinary research initiative in affective science, the Department of Psychology (http://psychology.tamu.edu) at Texas A&M University invites applications for one Assistant-level and one Associate-level tenure-track faculty position with research interests in affective neuroscience, broadly construed, to begin Fall 2016. These positions will complement and bolster a world-class core of translational researchers focused on understanding the psychological and neural processes underlying emotion regulation and self-control, emotional learning and memory, and stress and affective disorders. In this search cycle, priority for at least one of these positions will be given to behavioral neuroscientists studying the neural substrates of affective processes in animal models. Although the specific research area is open, applicants integrating cutting-edge neuroscientific methods with sophisticated behavioral approaches are preferred. The successful candidates will contribute to one or more existing graduate programs, including the interdisciplinary neuroscience program (http://tamin.tamu.edu). Applicants should have an outstanding record of research achievement, demonstrated potential for extramural research funding, and a strong commitment to undergraduate and graduate education. A Ph.D. in psychology, neuroscience, or a closely related field is required. To apply, please send electronic copies of a letter of intent, curriculum vitae, statements on research and teaching, 3-4 sample research publications, and 3 reference letters to Dr. Steve Maren at affectiveneuro@tamu.edu. The search committee will begin reviewing applications October 15, 2015 and will continue to review new applications until the positions are filled. Texas A&M University is an Equal Opportunity Employer and has a policy of being responsive to the needs of dual-career couples.
